

Hamid Oulbani, HiPerBorea master student at LSCE:

My name is Hamid Oulbani student in the second year of master in Dynamique des fluides (Fluid Dynamics) at Paris-Saclay University, I've been trained in the future professions of engineering and/or fundamental research where fluid mechanics and heat transfers play an important role. During my curriculum, I've acquired theoretical knowledge in fluids mechanics, solid mechanics, and heat transfer, as well as competence in applied mathematics, scientific computing (high-performance computing) and machine learning, tools that

enable me to treat and resolve different mathematical problems. I've developed a taste for numerical simulation and modeling in fluids mechanics, especially in aeronautics and acquired through these, competencies in problem analysis and interpretation of physical results and post-treatment.
