

Tomas Perez, HiPerBorea master student at GET:

My name is Tomas Perez and I'm a student of the Master in Earth Sciences (Atmosphere-Climate-Continental surfaces) at the Université Grenoble-Alpes in France. Through my formation, I have acquired knowledges about climate, hydrology and remote sensing. I have developed skills about satellite imagery treatment and numerical modelling of physical processes. I'm interested in the study of snow properties and processes and its interaction with the atmosphere and Earth's surface. Currently, I'm doing an internship at GET about the interaction between snowpack and permafrost in order to contribute to the HiPerBorea project.
